

**Executive Summary:** A brief overview of the entire project, including the problem statement, methodology, key findings, and recommendations.

**Introduction:** Describe the problem being solved, the importance of the solution, and any background information necessary to understand the project.

**Data Overview:** Provide an overview of the dataset used, including its source, structure, and any preprocessing or cleaning steps performed.

**Methodology:** Detail the methods used in the project, including data exploration, preprocessing techniques, model selection rationale, and evaluation metrics.

**Results:** Present the outcomes of your modeling efforts, including model performance metrics, feature importance, and any visualizations that support your findings.

Discussion: Interpret the results, discussing the model's performance, any challenges encountered, and the implications of your findings.

Conclusion and Recommendations: Summarize the key takeaways from your project and suggest next steps or recommendations based on your findings.

References: List any sources, datasets, or external resources referenced in your project.
